

CASE SUMMARY

Case #2011/1284

Complainant: Howard Roosevelt
1308 Herman Lane
Rockville, IN 47872
(765) 569-2375

Applicator: Tom Bekkering
Tommy Boys Lawn Care
631 Blackman St.
Clinton, IN 47842
(812) 208-7626

Licensed Applicator
Licensed Business

1. On July 22, 2011, I, Agent Matt Pearson of the Office of Indiana State Chemist (OISC) performed an investigation at the complainant's property in response to a claim of injury/damage to non-target trees and shrubs possibly resulting from exposure to the herbicide Imprelis. A Notice of Inspection was issued to Howard Roosevelt. I observed the following during my on-site investigation:
 - a) Browning of needles throughout trees and shrubs (see figure #1, #2 & #3).
2. I took the following photos depicting injured/damaged vegetation:

Figure #1

Figure #2

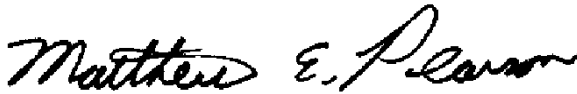

Figure # 3

3. I collected the following vegetation samples from visibly impacted non-target vegetation as described in paragraph #1 for examination by the Purdue Plant and Pest Diagnostic Laboratory (PPDL).
 - a) *Pine & Yew*
4. According to a report from the PPDL, *"There was no evidence of significant mite or disease observed on the pine and yew samples submitted. The pine sample*

exhibited needle scale and has been forwarded to Entomology for specific identification.

The Taxus (yew) sample exhibited symptoms (tip distortion and dieback) typically found to be associated with injury that can be caused by a synthetic auxinic (growth regulator type) herbicide. Typical symptoms caused by these herbicides can include epinasty (twisting and curving) of the leaves or needles, shoot and shoot tip; dieback of distorted shoot tips; leaf cupping which can be upward or downward, and in extreme cases, new leaves can be irregular in size and shape (usually smaller than normal) and have abnormal leaf margins."

5. According to the application information collected from the applicator Imprelis Herbicide (EPA Reg. No. 352-793) was applied on 4/12/2011, at the rate of 4.3 oz/acre using a Z sprayer; no application was made to the soil within the drip line of any of the trees or ornamentals; no application was made directly to any exposed roots of any trees or ornamentals.

Matthew E. Pearson
Engineering Specialist

Date: October 17, 2011

Disposition: No violation of the Indiana Pesticide Use and Application Law was documented against the pesticide applicator. Effective September 15, 2011, the Indiana registration for Imprelis Herbicide, EPA Reg. #352-793, was cancelled because it was determined by OISC that the product is "misbranded" (it bears label directions that are inadequate to prevent unreasonable adverse effects to non-target vegetation).

George N. Saxton
