CAUTION

See affixed label for additional directions for use, precautionary statements and first aid.

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This labeling and the full EPA approved label attached to the container must be in the possession of the user at the time of application. Read the label affixed to the container for this product before applying. Use of this product according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the container for the product

INSECTICIDAL AND MITICIDAL USES

Use this product as a foliar spray to repel and suppress pests. For best results use at lower rates when pest pressure is low or use as a preventative management tool in an integrated pest management system. When pest pressure is high use the product alone at its medium to high rates or tank mix with other contact insecticides or miticides.

RATES

Rates here indicated are for uses in agricultural crops grown in the field or in greenhouses.

Stand-Alone:

- Dilute 1-2 pints of this product per acre and apply by spraying every 4 -7 days, when used as a preventative management tool or in an integrated pest management system.
- For best results use a spreader/sticker with this product when applied alone.
- When tank mixing, read and carefully follow all applicable use directions, precautions, and limitations on the respective product labels. In interpreting all labels for the tank mix, the most restrictive situations must apply.
- When pest pressure is heavier or canopy is dense, use higher rates and consider tank mixes with other insecticides or miticides.

Tank Mix:

- When tank mixed with other insecticides or miticides this product will provide improved levels of control by increasing pest exposure to those products due to its irritant effect.
- Mix this product at a rate of 8 ounces per acre with other chemical or biological insecticides or miticides. Follow the use directions of all products used in the tank mix including use directions and additive/adjuvant requirements or constraints.

GREENHOUSE AND ORNAMENTAL USES

Stand Alone:

- Dilute 1-2 pints of this product per 100 gallons of water and apply by spraying every 4-7 days when used as a preventative management tool or in an integrated pest management system.
- For best results use a spreader sticker with this product when applied alone.
- When tank mixing, read and carefully follow all applicable use directions, precautions and limitations on the respective product labels. In interpreting all labels for the tank mix, the most restrictive situations must apply.
- When pest pressure is heavier, use higher rates and consider tank mixes with other insecticides or miticides.

Tank Mix:

- When tank mixed with other insecticides or miticides this product will provide improved levels of control increasing pest exposure to those products due to its irritant effect.
- Mix this product at a rate of 8 ounces per 100 gallons of water with other chemical or biological insecticides or miticides.

Supplemental Label

HOME AND GARDEN USE DIRECTIONS

This product is a repellent and insecticide that can be used alone as a repellent or in tank mixes with other biological or conventional insecticides or miticides to improve the level of control.

Use as a foliar spray to repel and suppress pests. For best results use at lower rates when pest pressure is low or use as a preventative management tool or integrated pest management system. When pest pressure is high use the product alone at its high rate or tank mix with other contact insecticides or miticides.

Can be used alone as a repellent or in tank mixes with other biological or conventional insecticides or miticides to improve the level of control

HOW MUCH TO USE FOR ALL APPLICATIONS

Stand Alone:

Dilute 1 to 1 ½ teaspoons of this product per gallon of water, 1 gallon of mixture will cover approximately 350 sq. ft. Apply by spraying every 4-7 days, when used as a preventative management tool or in an integrated pest management system.

Tank Mix:

- When tank mixed with other insecticides or miticides this product will provide improved levels of control increasing pest exposure to those products due to its irritant effect.
- Mix this product at a rate of $\frac{1}{2}$ teaspoon per gallon of water with other chemical or biological insecticides or miticides.
