Indiana Seed Control 2025 Annual Report

Presented here within is the 2025 annual report of the Office of Indiana State Seed Commissioner. It represents a summary of official inspectional activities related to seed control in Indiana, as well as laboratory analyses performed on official samples collected under the authority of Indiana Seed Law for agricultural and vegetable seeds distributed in Indiana.

The activities of our seed regulatory program revolve around our mission statement: ***“Provide education and service to consumers of seed and the seed industry and assure a quality product is available in the marketplace and truthfully represented.”***

The Indiana Seed Law is a “truth-in-labeling” law requiring basic quality factors to be expressed to represent a level of quality to potential purchasers and consumers. The purpose of the law is to provide the consumers with adequate information, through fair and consistent labeling, to make intelligent purchases of agricultural and vegetable seed products.

The inspection staff of the Office of Indiana State Chemist and Seed Commissioner provides marketplace surveillance throughout the state through inspectional visits to all retail sales outlets offering seed products for sale. These products routinely consist of various agricultural crop seeds, forage seeds, lawn and turf seeds, and vegetable seed kinds. Samples are obtained through official sampling methods and are analyzed in the Indiana State Seed Laboratory to determine compliance with labeled guarantees.

Our office is a charter member of the Association of American Seed Control Officials (AASCO) and the Association of Official Seed Analysts (AOSA) and we abide by the rules and protocols established by those associations. This report accurately reflects the dedication to our statutory responsibilities to enforce the Indiana Seed Law and provide consumer protection to Indiana farmers, consumers, and seedsmen.

Prepared and Submitted By:

A handwritten signature in black ink that reads "Jessica McVay".

Jessica McVay
Seed Administrator

ENFORCEMENT ACTIONS ...

Providing education, service and protection to Indiana consumers and industry to assure quality seed products of the highest integrity are truthfully represented and available in the marketplace.

- **OUR PURPOSE**

The Indiana Seed Law (IC 15-15-1) is administered by the Office of Indiana State Chemist & Seed Commissioner. The purpose of the law is twofold: First, to give the purchaser sufficient information to enable them to buy good seed, and second, to protect the honest and reliable seedsman and the farmer from unscrupulous dealers. Our field, laboratory and office staff strive to carry out our mission in administration and enforcement of the Act.

- **ENFORCEMENT ACTION TAKEN IN 2025**

Enforcement action initiated in 2025 was dictated by the seriousness of the violations found as a result of either laboratory analysis or inspectional observations discovered during facility inspections.

Samples tested in 2025:

Official Samples Tested:	1343
Official Samples Correctly Labeled:	1033
Samples Incorrectly Labeled:	190
Total Tests Completed on Samples:	3091

Breakdown of 2025 Violations: *multiple violations per sample in some cases

Minor Violations Based on Product Analysis: (Relabeling Orders):	105
Serious Violations Based on Product Analysis: (Stop Sale Orders):	74
Technical Violations Based on Label Analysis (Requested Change):	11
Inspector-Issued Stop Sale Order:	81
Active Indiana Seed Permits	880

Laboratory analysis done to verify label claims of “mechanical purity” (included Pure Seed %, other crop seed %, inert matter %, weed seed %, noxious weed seed), seed count, and “viability” (germination and hard seed,).

* Relabeling orders issued against seed lots classified as “minor” violations as a result of laboratory analysis

** Stop sale action taken against seed lots classified as “serious” violations as a result of laboratory analysis

- **USDA FEDERAL SEED ACT ENFORCEMENT**

13 samples were sent to the Federal Lab for apparent violations of the Federal Seed Act. The USDA monitored websites and sent letters for violations found.

OUR PRESENCE IN INDIANA...

The Indiana Seed Commissioner was established in 1921 with the passage of House Bill No. 99 which was signed into law on February 24, 1921 to create the Indiana Seed Law, a “truth-in-labeling” law.

Seed testing facilities were established at Purdue University following passage of that first law to provide support to enforcement activities conducted under the authority of the law. Testing services were also provided for residents and consumers of the state to assess seed quality on seed purchased and grown by farmers.

Indiana State Seed Laboratory over the years

The Office of Indiana State Chemist and Seed Commissioner (OISC) is located on the campus of Purdue University and housed in the Biochemistry Building in the College of Agriculture. This proximity to faculty, researchers and extension staff in the various agricultural sciences is beneficial in providing information on new technologies constantly emerging in the regulated industries OISC meets.

*Biochemistry Building
175 S. University Street, Purdue University
West Lafayette, IN 47907-206*

PROFESSIONAL AFFILIATIONS...

The Office of the Indiana Seed Commissioner maintains membership in national seed organizations and associations and agreements with federal agencies.

AASCO (Association of American Seed Control Officials) The Seed Commissioner's office participates as an active member of AASCO. The Association of American Seed Control Officials is an organization of seed regulatory officials from the United States and Canada. The Association was organized in 1949, from an outgrowth of regional meetings held in various parts of the United States. The members meet annually to discuss mutual concerns of seed law enforcement, to be updated on new developments in the seed industry, and to update the Recommended Uniform State Seed Law (RUSL) which the organization developed and maintains as a "model" law for states and federal programs.

AOSA (Association of Official Seed Analysts) The State Seed Laboratory is a member of AOSA, a national body responsible for development of uniform testing rules utilized in the U.S. and Canada and recognized internationally. AOSA was formed in 1908 in response to initial attempts by individual states to develop seed laws. This was the beginning of regulated seed commerce in the United States. Initial priorities included, as was defined in the constitution, an attempt to seek uniformity and accuracy in methods, results, and reports. It set as its objective an effort to perfect and make publicly known, through publication, uniform rules for seed testing. Primary functions include:

- Establish the AOSA Rules for Testing Seeds which are generally adopted by most states as the rules for testing seeds in their respective states.
- Contribute to the refinement and modification of the rules and procedures for seed testing.
- Ensure that testing procedures are standardized between analysts and between laboratories.
- Influence and assist in enforcement of appropriate seed legislation at state and federal levels.

USDA Seed Regulatory & Testing Branch - The Indiana Seed Commissioner's Office maintains Cooperative Agreement #12-25-A-3330 with the USDA Seed Regulatory and Testing Branch for mutual assistance and cooperation in regulatory matters pertaining to seed shipped into the state from out-of-state vendors. The federal agency authorizes the State Seed Commissioner to sample seed and inspect records pertaining to seed shipments made into Indiana subject to the Federal Seed Act. The Federal Seed Act, by virtue of its basic similarity to the Indiana Seed Law, supplements the State Law.

ANALYSIS & TESTING METHODS

The Indiana State Seed Laboratory is an active member of the Association of Official Seed Analysts (AOSA) and the methods used for sample preparation and analysis are those approved by the Association. Under such “Rules for Testing Seeds” a standard analysis has been developed in conjunction with the

enforcement of labeling laws that furnishes information as to the composition of the seed sample and the ability

of the seed to produce plants. The rules, which are routinely followed, summarize and make available the accumulated experience of seed analysts.

The laboratory also offers a service testing program available to the public.

Individuals and/or companies requesting analysis information may submit samples to the laboratory for testing and specify the type of test or tests desired (purity, germination, noxious weed seed exam). In 2021, we increased our testing fees. They are \$18 per sample for individual purity, germination and/or identification tests, and \$36 per sample for complete tests (purity, germination, noxious weed seed exam). Detailed reports of analysis are furnished to the sender at the completion of the testing.

The laboratory also offers immunoassay strip testing for traits in soybeans, corn and alfalfa. This testing is first level testing and can show the presence or absence of these traits. It is accurate to be within roughly five percent. If a more detailed test is required, we partner with a lab that conducts PCR DNA testing and can quote those tests.

Our laboratory is staffed by highly qualified professionals, including two nationally certified seed analysts certified in both purity and germination testing and one nationally certified seed analyst certified in germination testing. These certifications are awarded through the Association of Official Seed Analysts (AOSA) and demonstrate our commitment to providing accurate, reliable, and scientifically sound seed analysis.
